## Concept Overview

Provide track selection and playback controls while iTunes is in full screen visualization mode.

### Playback controls

Play/Pause

Previous Track/RW

Next Track/FF

### Album browser toggle

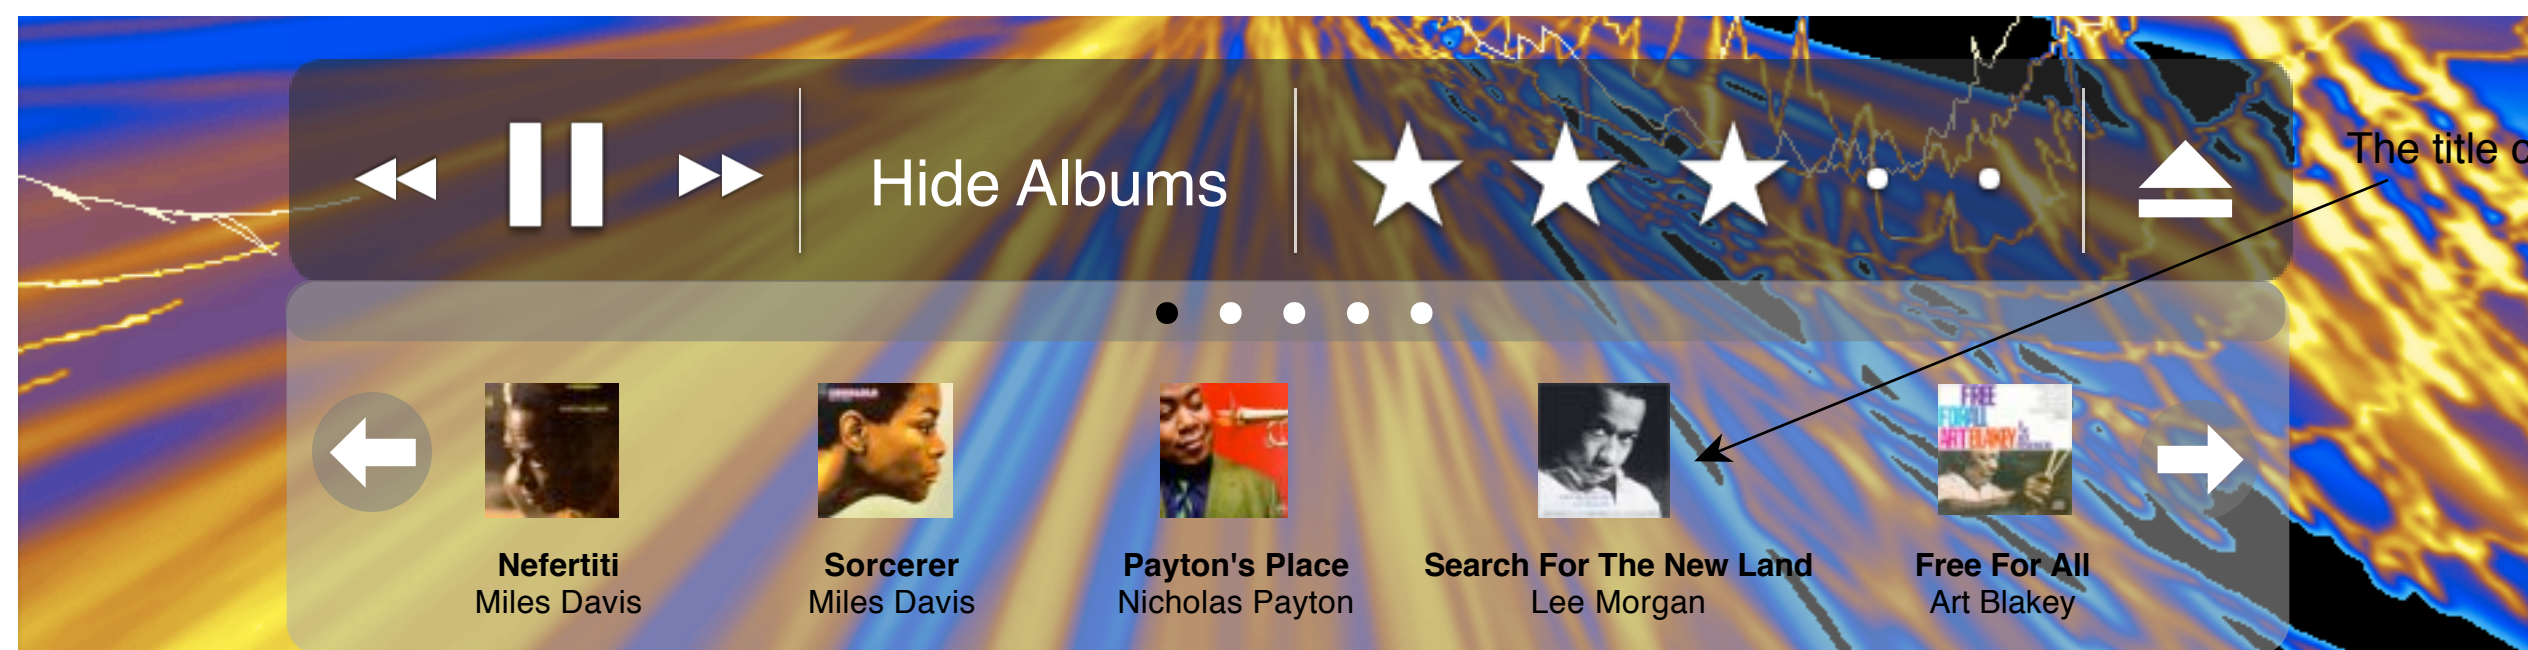

A text label with an on-hover effect (coloration or underlining) might be better than any icon.

### Track rating

This could be disabled for situations in which you don't want anyone to modify the ratings. Stars would appear gray when modification isn't permitted.

### Eject

This could also be disabled for those times when you either don't want anyone to take a CD out or put one in.

The title cut is killin'

Similar to the iTunes Music Store, the playlist's albums can be browsed using the circles or the arrows.
